All previous notifications made by the Governor-General in Council under the said sections are hereby superseded, but all licenses or duplicates granted or renewed, all fees imposed or levied and all powers conferred by or under any notification so superseded, shall, so far as they are consistent herewith, be deemed to have been respectively granted, renewed, imposed, levied or conferred hereunder. *Supersession of previous notifications; and savings.*

3. Nothing in these rules shall apply— *General exemptions*

(*i*) to the manufacture, possession, sale, packing, transport or importation of toy fireworks, such as paper caps for toy pistols, under such conditions and in such quantities as the Local Government, or, in the case of transport by rail, the Railway Board, on the recommendation of the Chief Inspector of Explosives, may from time to time determine;

(*ii*) to the manufacture, possession or sale of gunpowder in any of the Agency Tracts in the Ganjam, Vizagapatam and Godavari districts of the Presidency of Madras;

(*iii*) to the possession or transport of any explosive in any port in which special rules made by the Local Government under the Act are for the time being in force in so far as they are expressly superseded by, or are inconsistent with, such special rules;

(*iv*) to the packing, transport or importation of capped safety cartridge cases, if otherwise empty, when packed, transported or imported in the same consignment with arms covered by a license granted under the Indian Arms Act, 1878: [XI of 1878.]

(*a*) a cartridge or charge for small-arms, cannon or any other weapon, or for blasting, or

(*b*) a safety or other fuze for blasting or for shells, or

(*c*) a tube for firing explosives, or

(*d*) a percussion-cap, detonator, fog-signal, shell, torpedo, war-rocket, or any other contrivance other than a fire-work.

(4) "Chlorate-mixture" means any explosive containing a chlorate.

(5) "Detonator" means a capsule or case which is of such strength and construction, and contains fulminate in such quantity, that the explosion of one capsule or case would communicate the explosion to other like capsules or cases.

(6) "District authority" means—

(*i*) in a Presidency town, or its suburbs or in Rangoon, the Commissioner of Police;

(*ii*) elsewhere, the Magistrate of the district.

(7) "Fulminate" means any chemical compound or mechanical mixture whatever, which, from its great susceptibility to detonation, is suitable for employment in percussion-caps or any other appliance for developing detonation, or which, from its extreme sensibility to explosion and from its great instability (that is to say, readiness to undergo decomposition from very slight exciting causes), is especially dangerous.

(8) "Gunpowder" means gunpowder ordinarily so called.

(9) "Nitrate-mixture" means any preparation, other than gunpowder, which is formed by the mechanical mixture of nitrate with any form of carbon or with any carbonaceous substance not possessed of explosive properties, whether sulphur be or be not added to such preparation, and whether such preparation be or be not mechanically mixed with any other non-explosive substance:—

and includes such explosives as—

Chilworth special powder,	Bobbinite, and
Ammonal,	Westfallite.

(10) "Nitro-compound" means any chemical compound which is possessed of explosive properties or is capable of combining with metals to form an explosive compound, and is produced by the chemical action of nitric acid (whether mixed or not with sulphuric acid), or of a nitrate mixed with sulphuric acid, upon any carbonaceous substance, whether such compound is mechanically mixed with other substances or not.

(11) "Small-arm nitro-compound" means a nitro-compound adapted and intended exclusively for use in cartridges for small-arms.

(12) "Safety cartridge"—

(*i*) means a cartridge for small-arms, the case of which can be extracted from the small-arm after firing, and which is so closed as to prevent any explosion in one cartridge being communicated to other cartridges; and

(*ii*) includes a rifle-calibre machine-gun cartridge, if it is as described in clause (*i*), whether it is for use with a machine-gun having chambers identical with those of rifles or with a machine-gun having special chambers:

Provided that the diameter of the cartridge in either case (*i*) or case (*ii*) does not exceed one inch.

(13) "Safety fuze" means a fuze for blasting which burns and does not explode, and which does not contain its own means of ignition, and which is of such strength and construction, and contains an explosive in such quantity, that the burning of such fuze would not communicate laterally with other like fuzes.

(14) "Testing authority" means the Chemical Examiner or such other officer as the Local Government may appoint in this behalf.

CHAPTER II.

CLASSIFICATION OF EXPLOSIVES.

5. (1) For the purposes of these rules, explosives shall be classified as follows, namely :— Classes of explosives.

„ 2	...	...	Nitrate-mixture.
„ 3	...	...	Nitro-compound.
„ 4	...	...	Chlorate-mixture.
„ 5	...	...	Fulminate.
„ 6	...	...	Ammunition.
„ 7	...	...	Firework.

(2) When any explosive falls within more than one of the said classes, it shall be deemed to belong exclusively to the latest of such classes.

6. Nitro-compounds shall, for the purposes of these rules, be sub-divided as follows, namely :— Division of nitro-compounds.

(*a*) Division 1, comprising—

(*i*) such explosives as—

Amberite No. 2,	Gun-cotton,
Ammonite,	Picric powder,
Bellite,	Roburite,
Coopal's powder,	Schultz's powder, and
E. C. sporting powder,	Tonite (or cotton powder), and

(*ii*) any nitro-compound, as hereinbefore defined, which is not comprised in Division I.

7. Chlorate-mixtures shall, for the purposes of these rules, be sub-divided as follows, namely :— Division of chlorate mixtures.

(*a*) Division 1, comprising—

(*i*) such explosives as—

Permonite and
Polarite, and

(*ii*) any chlorate preparation which consists partly of nitro-glycerine or of some other liquid nitro-compound, and

(*b*) Division 2, comprising—

SCHEDULE I.

PRESCRIBED TESTS.

[*Vide Rule 16.*]

I.—Heat Test as applied to Explosives of the Nitro-compound Class.

GENERAL INSTRUCTIONS.

Apparatus required.

1. A water-bath, consisting of a spherical glass or copper vessel [(A) Fig. 1] of about 8 inches diameter, and with an aperture of about 5 inches; the bath is filled with water to within a quarter of an inch of the edge. It has a loose cover of sheet copper about 6 inches in diameter (B), and rests on a tripod stand about 11 inches high (C), which is covered with coarse iron wire gauze (*e*), and is surrounded with a screen of thin sheet tin or copper (D). Within the latter is placed an Argand burner (F), with a glass chimney. The cover (B) has four holes arranged as seen in Fig. II, No. 4, to receive the regulator, No. 3 the thermometer, Nos. 1 and 2 the test-tubes containing the gun-cotton or other materials to be tested. Around holes 1 and 2 on the under side of the cover are soldered three pieces of brass wire with points slightly converging (Fig. III); these act as springs and allow the test-tubes to be easily placed in position and removed.

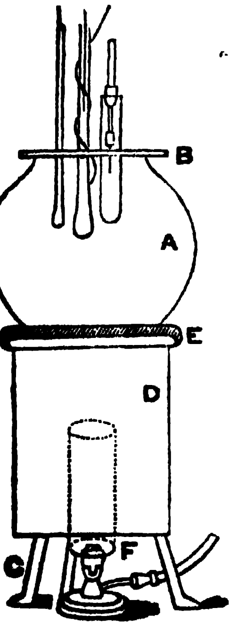

FIG. II.

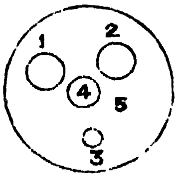

FIG. IV.

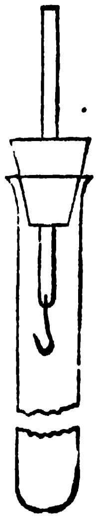

FIG. III.

* 2. Scheibler's or Page's temperature regulator.
* 3. Two cells of Le Clanché's battery No. 1 } if Scheibler's regulator
* 4. A few yards of insulated copper wire } is used.

5. Test-tubes from 5¼ to 5½ inches long, and of such diameter that they will hold from 20 to 22 cubic centimetres of water when filled to a height of 5 inches.

6. India-rubber stoppers, fitting the test-tubes and carrying an arrangement for holding the test-paper, *viz.*, a narrow glass tube passing through the centre of the stopper, drawn out so as to form a hook, or terminating in a platinum wire hook (Fig. IV).

7. A thermometer, with range not less than from 30° to 212° Fahrenheit.

8. A minute clock.

Materials required.

(*a*) *Test-paper.*—The test-paper is prepared as follows:—45 grains of white maize starch (cornflour), previously washed with cold water, are added to 8½ ounces of distilled water, the mixture is stirred, heated to boiling, and kept gently boiling for 10 minutes; 15 grains of pure potassium iodide (*i.e.*, which has been recrystallized from alcohol) are dissolved in 8½ ounces of distilled water. The two solutions are thoroughly mixed and allow to get

* This is not absolutely required, as the temperature of the bath can be kept constant by proper attention to the heating flame.

cold. Strips, or sheets, of best white English filter paper, weighing air dry, from 4·1 to 4·6 grammes per 100 square inches, previously washed with water and re-dried, are dipped into the solution thus prepared, and allow to remain in it for not less than 10 seconds; they are then allowed to drain and dry in a place free from laboratory fumes and dust The upper and lower margins of the strips, or sheets, are cut off, and the paper is preserved in well-stoppered or corked bottles *and in the dark.** The dimensions of the pieces of test-paper used are about $\frac{4}{10}$ inch by $\frac{8}{10}$ inch (10 mm. by 20 mm.).

(b) Standard tint-paper.—A solution of caramel in water is made of such concentration that when diluted one hundred times (10 cc. made up to 1 litre) the tint of this diluted solution equals the tint produced by the Nessler test in 100 cc. water containing 0·000075 grm. of ammonia or 0·00023505 grm. of chloride of ammonium. With this caramel solution lines are drawn on strips of white filter paper† by means of a clean quill pen. When the marks thus produced are dry the paper is cut into pieces of the same size as the test-paper previously described, in such a way that each piece has a brown line across it near the middle of its length, and only such strips are preserved in which the brown line has a breadth varying from ½ mm. to 1 mm. ($\frac{1}{50}$ of an inch to $\frac{1}{25}$ of an inch).

II.—Testing Dynamite, Blasting Gelatine, and other Explosives of the First Division of the Nitro-compound Class.

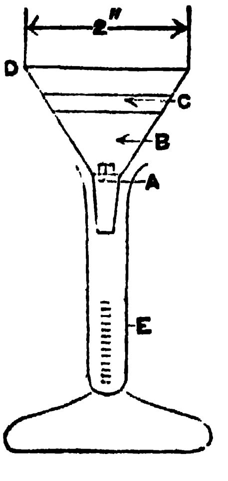
A.—DYNAMITE, ETC., ETC.

Nitro-glycerine preparations, from which the nitro-glycerine can be extracted in the manner described below, *must* satisfy the following test:—

This test, however, though at present looked upon as the most important, as far as testing the purity of the nitro-glycerine is concerned, is in England only one of several which any given sample of nitro-glycerine preparation has to satisfy in order to establish its compliance with the definition in the authorised list.

Apparatus required.

A funnel 2 inches across (D), a cylindrical measure divided into grains (E) (*see* sketch).



Mode of operation.

About 300 to 400 grains of dynamite (B) finely divided are placed into the funnel which has previously been loosely plugged by some freshly-ignited asbestos (A).

The surface is smoothed by means of a flat-headed glass rod or stopper, and some clean washed and dried Kieselguhr (C) is spread over it to the depth of about ⅛ inch.

Water is next carefully dropped from a wash bottle upon this Kieselguhr, and when the first portion has been soaked up more is added; this is repeated until sufficient nitroglycerine has been collected in the graduated measure (E) below.

* When a paper is freshly prepared, and as long as it remains in good condition, a drop of dilute acetic acid, put on the paper with a glass rod, produces no coloration. In process of time, however, the stronger the light to which the paper is exposed, the sooner a drop of acid produces a brown or bluish coloration (a single hour of direct sunlight produces a marked effect), and whenever this is the case the paper should be rejected. After preparation the paper should be kept in the dark for a month before being taken into use. After that, if carefully kept in the dark, it will remain good for six months or more, but should be tested from time to time as above.

† This paper must be carefully washed with distilled water in the first instance, to remove any traces of bleaching matter, and dried.

If any water should have passed through with the nitro-glycerine, it should be removed with a piece of blotting paper and the nitro-glycerine, if necessary, filtered through a dry paper filter.

Application of the Test.

The thermometer is fixed so as to be inserted through the lid of the water-bath described under I into the water (which is to be steadily maintained at a temperature of 160° Fahr.*) to a depth of 2¾ inches. Fifty grains of nitro-glycerine to be tested are weighed into a test-tube in such a way as not to soil the sides of the tube. A test-paper is fixed on the hook of the glass rod so that when inserted into the tube it will be in a vertical position. A sufficient amount of a mixture of half distilled water and half glycerine to moisten the upper half of the paper is now applied to the upper edge of the test-paper by means of a camel's-hair pencil, the cork carrying the rod and paper is fixed into the test-tube and the position of the paper adjusted, so that its lower edge is about half-way down the tube; the latter is then inserted through one of the perforations of the cover to such a depth that the lower margin of the moistened part of the paper is about five-eighths of an inch above the surface of the cover. The test is complete when the faint brown line, which after a time makes its appearance at the line of boundary between the dry and moist part of the paper, equals in tint the brown line of the standard tint paper.

The nitro-glycerine under examination will not be considered to have satisfied the test unless the time necessary to produce the standard tint as above described is at *least* 15 minutes.

B.—BLASTING GELATINE, GELATINE DYNAMITE, AND ANALOGOUS PREPARATIONS.

Fifty grains of blasting gelatine are to be intimately incorporated with 100 grains of French chalk.† The mixture is to be gradually introduced into a test-tube of the dimensions prescribed above for the dynamite heat test, with the aid of gentle tapping upon the table, between the introduction of successive portions of the mixture into the tube, so that when the tube contains all the mixture it shall be filled to the extent of 1¾ inches of its height. The test-paper is then to be inserted and the heat is to be applied in the manner prescribed above for the dynamite heat test, and the sample tested is to withstand exposure to 160° Fahr. for a period of 10 minutes, before producing a discoloration of the test-papers corresponding in tint to the standard colour test which is employed for governing the results of the dynamite heat tests.

(For Exudation and Liquefaction tests for Blasting Gelatine, etc., etc., *see* Appendix).

N.B.—Non-gelatinized nitro-glycerine preparations from which the nitro-glycerine cannot be expelled by water are tested without any previous separation of the ingredients, the temperature being as above (160° Fahr.) and the time being 7 minutes.

C.—CORDITE AND BALLISTITE.

1. Apparatus required.

The apparatus necessary for the application of the heat test to cordite is identical with that described above for explosives of the nitro-compound class generally‡ with the addition of a mill and a nest of sieves§ similar to those used at Waltham Abbey for preparing the cordite for testing (*see* instructions below).

* For explosives supplied for His Majesty's Military and Naval Services the temperature is fixed by the War Office at 180°.

† This can be readily effected by carefully working the two materials together with a wooden pestle in a wooden mortar.

The French chalk should be of good commercial quality, and, after being carefully washed with distilled water and dried in a water oven, it should be exposed under a bell jar to moist air until it has taken up about 0·5 per cent. of moisture. It should then be bottled for use; and with ordinary care the limits of 0·5 per cent. can be maintained in keeping.

‡ In the Waltham Abbey apparatus the cover (Fig. II) has all the holes around the circumference instead of having one in the centre and three around the circumference.

§ A nest of two sieves with the holes drilled in sheet copper. The holes in the top sieve have a diameter=14 B. W. G., those in the second=21 B. W. G.

If too hard for the mill, it may be softened by exposure to the vapour of acetone, or reduced to the necessary degree of sub-division by means of a sharp moderately coarse rasp. Should it have become too soft in the acetone vapour for the mill, it should be cut up into small pieces which may be brought to any desired degree of hardness by simple exposure to air.

Explosives which consist partly of gelatinized collodion cotton and partly of ungelatinized gun cotton are best reduced to powder by a rasp, or softened by exposure to mixed ether and alcohol vapour at a temperature of 90° to 100° Fahr.

2. *Preparation of the sample to be tested.*

Pieces half an inch long are cut from one end of every stick selected for the test; in the case of the thicker cordites, each piece so cut is further subdivided into about four portions. These cut pieces are then passed once through the mill, the first portion of material which passes through being rejected on account of the possible presence of foreign matter from the mill. The ground material is put on the top sieve of the nest of sieves and sifted. The portion which has passed through the top sieve and been stopped by the second is taken for the test. If the mill is properly set the greater portion of the ground material will be of the proper size.

If the volatile matter in the explosive exceed 0·5 per cent., the sifted material should be dried at a temperature not exceeding 140° Fahr. until the proportion does not exceed 0·5 per cent.

After each sample has been ground, the mill must be taken to pieces and carefully cleaned.

3. *Application of the Test.*

The thermometer is fixed so as to be inserted through the lid of the water-bath described under paragraph I, so as to be immersed in the water to a depth of 2¾ inches. The water is maintained at a constant temperature of 180° Fahr. When this temperature is reached, 25 grains of the sifted cordite are put into one of the test-tubes, and collected at the bottom by gentle tapping. A test-paper is fixed on to the hook of the glass rod, so that when inserted into the tube it will be in a vertical position. A mixture of equal parts of distilled water and pure glycerine (Price's) is now applied to the upper edge of the test-paper by means of a camel's-hair pencil, in sufficient amount to moisten the upper half; the stopper carrying the rod and paper is fixed into the test-tube and the position of the paper adjusted so that its lower edge is about half way down the tube; the latter is then inserted through one of the perforations of the cover to the same depth as the thermometer. The lower margin of the moistened part of the paper should then be about five-eighths of an inch above the surface of the cover. The test is completed when the faint brown line, which after a time makes its appearance at the margin between the wet and dry portions of the test-paper, equals in depth of tint the brown line drawn on the standard tint paper.

4. The time which elapses between the insertion of the test-tube and the completion of the test must not be less than 15 minutes.

N.B.—In the case of ballistite the treatment is the same, except that when it is in a very finely granulated condition it need not be cut up.

III.—Testing Gun-cotton, Schultz's Gun Powder, E. C. Powder, and other explosives of the 2nd Division of the Nitro-compound Class.

A.—COMPRESSED NITRO-CELLULOSE, TONITE, ETC., ETC.

Sufficient material to serve for two or more tests is removed from the centre of the cartridge by gentle scraping, and, if necessary, further reduced by rubbing through a sieve with a clean hard brush.

The fine powder thus produced is spread out in a thin layer upon a paper tray 6 inches by 4½ inches which is then placed inside a water oven, kept, as nearly as possible, at 120° Fahr.

The wire gauze shelves in the oven should be about 3 inches apart. The sample is allowed to remain at rest for 15 minutes in the oven, the door of which is left wide open.

After the lapse of 15 minutes the tray is removed and exposed to the air of the room for two hours, the sample being at some point within that time rubbed upon the tray with a brush, in order to reduce it to a fine and uniform state of division.

Application of the test.

The cover of the water-bath is fitted with the gas regulator which is inserted through the centre hole (No. 4). The thermometer is fixed into hole No. 3. The water in the bath is then heated to 170° Fahr., and the regulator set to maintain that temperature. Twenty grains of the sample to be tested

are weighed out, placed in the test-tube, and gently pressed down until the specimen occupies a space of not more than $1\frac{3}{16}$ inches in a test-tube of the dimensions specified. A test-paper is affixed to the hook of the glass rod or tube, and moistened by touching the upper edge with a drop of distilled water containing 50 per cent. of Price's glycerine. The quantity of liquid used must be only sufficient to moisten about half of the paper. The cork carrying the rod and test-paper is then fixed into the test-tube, and the latter inserted into the bath to a depth of 2¼ inches, measured from the cover, the regulator and thermometer being inserted to the same depth. The test-paper is to be kept near the top of the test-tube, but clear of the cork, until the tube has been immersed for about five minutes. A ring of moisture will about this time be deposited upon the sides of the test-tube a little above the cover of the bath; the glass rod must then be lowered until the lower margin of the moistened part of the paper is on a level with the bottom of the ring of moisture in the tube; the paper is now closely watched. The test is complete when the faint brown line which makes its appearance at the line of boundary between the dry and moist parts of the paper equals in tint the brown line of the standard tint paper.

The interval of time between the first insertion of the tube containing the sample of gun-cotton in the water at 170° and the production of the standard tint constitutes the test, and this interval of time must be *not less* than 10 minutes, or the sample will not be considered to have satisfied the test.

B.—GELATINIZED AND SEMI-GELATINIZED NITRO-CELLULOSE PREPARATIONS.*

Twenty-five grains introduced into the test-tube* of the dimensions prescribed for the dynamite heat test, then proceed as for blasting gelatine, etc., taking the temperature at 180° Fahr., and the time as 15 minutes.

C.—NITRO-CELLULOSE NOT INCLUDED IN A. OR B., SCHULTZ'S POWDER, E. C. POWDER, ETC., ETC.

Sufficient of the sample, without further mechanical division, is dried in the oven as above, and then exposed for two hours to the air. The test as directed above for compressed nitro-cellulose, etc., is then applied, the minimum duration of test being the same, viz., 10 minutes.

D.—PICRIC ACID.

(1) The material shall contain not more than 0·3 part of mineral or non-combustible matter in 100 parts by weight of the material dried at 160° Fahr.

(2) It should not contain more than a minute trace of lead.

(3) One hundred parts of the dry material shall not contain more than 0·3 part of *total* (free and combined) sulphuric acid, of which not more than 0·1 part shall be *free* sulphuric acid.

(4) Its melting point should be between 248° and 253° Fahr.

E.—AMMONITE, BELLITE, ROBURITE, AND EXPLOSIVES OF SIMILAR COMPOSITION.

These are required to stand the same heat test as compressed nitro-cellulose.

IV.—Testing Chlorate Mixtures.

The material must not be too sensitive† and must show no tendency to increase in sensitiveness on keeping.

The material must contain nothing liable to reduce the chlorate.

Chlorides calculated as potassium chloride must not exceed 0·25 per cent.

* If in a compressed form it should be broken up in the same manner as cordite and ballistite.

† They will be considered too sensitive if they can be exploded however partially by means of a glancing blow with a broomstick on soft wood (such as deal).

The material must contain no free acid, or substance liable to produce free acid.

Explosives of this class containing nitro-compounds will be subject to the heat test as if they belonged to Class III.

V.—Testing Ammunition (Divisions 2 and 3).

Any explosive made up into ammunition (other than Division I), for which a test is provided in the schedule, is to be tested as if not so made up.

APPENDIX.

Exudation and Liquefaction Test for Blasting Gelatine, Gelatine Dynamite and analogous Preparations.

TEST FOR LIQUEFACTION.

A cylinder of blasting gelatine is to be cut from the cartridge to be tested, the length of the cylinder to be about equal to its diameter and the ends being cut flat.

The cylinder is to be placed on end on a flat surface without any wrapper, and secured by a pin passing vertically through its centre.

In this condition the cylinder is to be exposed for 144 consecutive hours (six days and nights), to a temperature ranging from 85° to 90° Fahr. (inclusive), and during such exposure the cylinder shall not diminish in height by more than one-fourth of its original height, and the upper cut surface shall retain its flatness and the sharpness of its edge.

Note.—If the blasting gelatine and the gelatine dynamite to be tested be not made up in a cylindrical form, the above test is to be applied with the necessary modifications.

TEST FOR LIABILITY TO EXUDATION.

There shall be no separation from the general mass of the blasting gelatine or gelatine dynamite of a substance of less consistency than the bulk of the remaining portion of the materials under any conditions of storage, transport, or use, or when the material is subjected three times in succession to alternate freezing and thawing, or when subjected to the liquefaction test hereinbefore described.

(*2*) In the case of filling cartridges for small-arms the operation may, if preferred, be carried out in the upper room of a building to which the conditions in clause (1) as to distance need not apply.

Provided that no more than five pounds of explosive (except such as may be contained in safety cartridges) shall be in the room where the operation is being carried on.

(*3*) In all other cases the manufacture shall be carried on in a one-storeyed building.

5. The number of persons employed at any one time in manufacture in any one building or room shall not exceed six, and only persons actually manufacturing or superintending manufacture shall be allowed inside the place of manufacture.

6. No iron or steel implements shall be used in manufacture. Only copper, gun-metal or wooden tools are permissible.

7. All explosives, as manufactured, shall be removed without delay to a safe place of storage, and no explosive shall be allowed to accumulate in the place of manufacture.

8. Manufacture shall only be carried on between sunrise and sunset.

9. No smoking or lights shall be allowed in or near a room where explosives are being manufactured.

10. All sales of explosives under this license must be effected on the premises shown on the face of the license.

11. An explosive shall not be sold to any child apparently under the the age of fourteen years, nor shall any child under that age be employed in manufacture.

12. The explosives possessed by the licensee shall be kept in one or other or both of the following modes:—

Mode A, that is to say, in a building or excavation, which is detached from any dwelling-house, and is separated by the distances prescribed in condition No. 4* from any highway, street, public thoroughfare or public place, and is made and closed so as to prevent unauthorised persons from having access thereto and to secure it from danger from without, and is exclusively appropriated to keeping explosives ; and

(*a*) such a building must be substantially constructed of brick, stone or concrete, or must be a securely constructed fireproof safe; and

(*b*) such an excavation must be formed in solid rock, or earth, or in mine refuse not liable to ignition, and must not open into, from or out of any mine, quarry, tunnel or underground place which is in use for the carrying on of any work or for the employment of any person.

Mode B, that is to say, in a substantial receptacle (whether or not a fireproof safe) which is closed and secured so as to prevent authorized persons from having access thereto, and is exclusively appropriated to the keeping of explosives, and is placed inside a dwelling-house, or inside a building which is not itself qualified for the keeping of explosives in Mode A :

Provided that a fireproof safe shall not be used for the keeping of any explosive other than gunpowder or small-arm nitro-compound and cartridges of the 2nd Division of the 6th (ammunition) Class (not containing their own means of ignition) and made with gunpowder or small-arm nitro-compound, such as cartridges or charges for cannon or blasting purposes.

(2) if the only explosive kept be manufactured fireworks, the maximum shall be—

manufactured fireworks	Two hundred.	Fifty.

(3) in any other case the maximum shall be—

mixed explosives, including gun-powder, small-arm nitro-compound and manufactured fireworks, etc., in all ...	Sixty.	Fifteen.
and, in addition, of explosives contained in ammunition of the 1st Division of the 6th Class	Any quantity.	Any quantity.

Provided that in each of the three cases above-mentioned the aggregate quantity kept on the premises in Mode A and Mode B together may not in any case exceed the maximum quantity which may be kept in Mode A.

14. With respect to a building or excavation used in Mode A, and a receptacle used in Mode B,—

(*a*) the interior thereof, and the shelves and fittings therein, shall be so constructed, or so lined and covered, as to prevent the exposure of any iron or steel, or the detaching of any grit, iron or steel or similar substance, in such manner as to come into contact with the explosive;

and such interior, shelves and fittings shall, so far as is reasonably practicable, be kept free from grit and otherwise clean;

(*b*) in the case of any explosive being possessed which is liable to be dangerously affected by water, due precautions shall be taken to exclude water therefrom;

(*c*) all articles or substances of an explosive or highly inflammable nature and all lights shall be kept at a safe distance from the explosive, and from any room or part of a building, excavation or receptacle containing the same; and

(*d*) no person in any such room or part of a building or any such excavation, or any such receptacle, shall have any iron or steel in his possession, or attached to or on his boots or shoes:

Provided that this condition, so far as it relates to the exposure of iron or steel or similar substances, shall not be obligatory in the case where no explosive is kept other than ammunition of the 1st Division of the 6th (ammunition) Class.

and, when publicly exposed for sale or when sold, the outermost receptacle containing such explosives shall have affixed the name of the explosives in conspicuous characters by means of a brand or securely attached label or other mark:

Provided that two samples of each kind of firework may be exposed for sale without complying with the foregoing clauses of this condition, if such samples be placed in such a position that no light or fire is, or is likely to be, brought near them.

16. (1) Explosives of different descriptions which may be kept under this license shall be separated by an intervening partition of such substance and character, or by such intervening space, as will effectually prevent explosion or fire in the one communicating with the other:

Viceregal Residence	

In the case of any building or work above-mentioned which is so screened from the magazine by the natural features of the ground or by good and sufficient artificial mounds of earth as not to be visible from any part of such magazine, the distance assigned above as that to be observed between such building or work and the magazine may be reduced by one-half.

In the case of any building or work above-mentioned which is so screened from the magazine by an intervening hill, that a line drawn from any part of such building or work to any part of such magazine would pass through such hill, the distance assigned by this schedule as that to be observed between such building and work and the magazine may be reduced by three-fourths; but if a Government Inspector notifies in writing that in his judgment the intervening hill, in respect of which such reduction is claimed, is not of a character to justify such reduction, this clause, authorising such reduction, shall be deemed not to apply in respect of the said building or work.

* The distances will be required to be kept clear not merely on the first establishment of the magazine but during the continuance of the license.

† This rule also applies to two or more magazines kept on the same premises, when such magazines—

(1) belong to the same occupier, or

(2) are so kept by mutual consent of the respective occupiers.

2. All explosives must be kept in the magazine indicated in this license.

3. The magazine is not to be used until this license is endorsed by the district authority in accordance with rule 48.

4. The licensee shall keep records and accounts of all explosives in stock and of all sales or issues in such form as the Local Government may from time to time direct.

5. There shall not be at the same time in the magazine any quantity of explosives exceeding the quantity specified in the license.

6. The magazine shall be used only for the keeping of the explosives specified in the license, and of receptacles for, or tools or implements for work connected with the keeping of such explosives.

7. The interior of the magazine, and the benches, shelves and fittings therein, shall be so constructed or so lined or covered as to prevent the exposure of any iron or steel and the detaching of any grit, iron, steel or similar substances in such manner as to come into contact with the explosives; and such interior, benches, shelves and fittings shall, so far as is reasonably practicable, be kept free from grit and otherwise clean; and, in the case of any explosive being possessed which is liable to be dangerously affected by water, due precautions shall be taken to exclude water therefrom:

Provided that so much of this condition as relates to precautions against the exposure of any iron or steel and the detaching of any grit, iron, steel or similar substances shall not be obligatory in a building in which no explosive other than an explosive of the 1st Division of the 6th (ammunition) Class is kept.

8. The magazine shall have attached thereto an efficient lightning conductor, which shall be tested at least once during the currency of the license, and a certificate showing the result and date of the last test shall be hung up in a conspicuous place in the magazine.

9. Before repairs are done to any room or magazine or part thereof, the same shall, as far as is practicable, be cleaned by the removal of all explosives or mixed ingredients thereof, and the thorough washing out of such room, magazine or part; and after such cleaning these conditions shall cease to apply to such room or part of the magazine until any explosive is again taken into it:

Provided that this condition shall not be obligatory in a magazine in which no explosive other than an explosive of the 1st Division of the 6th (ammunition) Class is kept.

10. Except after such cleaning, all tools and implements used in, or in making any repairs to, any part of the magazine shall be made only of wood, copper or brass or some soft metal or material, or shall be covered with some safe and suitable materials:

Provided that this condition shall not be obligatory in a magazine in which no explosive other than an explosive of the 1st Division of the 6th (ammunition) Class is kept.

11. Due provision shall be made, by the use of suitable working clothes without pockets, or of suitable shoes, or by searching or otherwise, or by some such means, for preventing the introduction into the magazine of fire lucifer matches or any substance or article likely to cause explosion or fire, or of any grit, iron or steel: but this rule shall not prevent the introduction of an artificial light of such construction, position or character as not to cause any danger of fire or explosion:

Provided that so much of this condition as applies to the exclusion of grit, iron or steel shall not be obligatory in a building in which no explosive other than an explosive of the 1st Division of the 6th (ammunition) Class is kept.

12. No person shall smoke in any part of the magazine.

13. No person under the age of fourteen years shall be employed in or enter the magazine, except in the presence and under the supervision of some grown-up person, and no explosive shall be sold to any such person.

14. (1) Two or more descriptions of explosives which may lawfully be possessed in a licensed magazine may be possessed in the same magazine if they are separated from each other by an intervening partition of such substance and character, or by such intervening space, as will effectually prevent explosion or fire in the one communicating with the other:

(2) Provided as follows:—

(*a*) the various explosives of Classes 1 (gunpowder), 2 (nitrate-mixture), 3 (nitro-compound) and 4 (chlorate-mixture), safety fuzes belonging to the 1st Division of the 6th (ammunition) Class, and such of the various explosives of the 2nd Division of the 6th (ammunition) Class as do not contain any exposed iron or steel may be kept with each other without any intervening partition or space;

(*b*) the various explosives of the 1st Division of the 6th (ammunition) Class may be kept with each other without any intervening partition or space;

(*c*) such of the various explosives of the 2nd Division of the 6th (ammunition) Class as contain any exposed iron or steel, may be kept with each other without any intervening partition or space;

(*d*) the various explosives of the 3rd Division of the 6th (ammunition) Class may be kept with each other without any intervening partition or space;

(*e*) the various explosives of the 7th (firework) Class may be kept with each other without any intervening partition or space.

(3) Save as aforesaid, two or more descriptions of explosives shall not be kept in the same magazine.

15. The licensee, and every person employed in or about the magazine, shall take all due precautions for the prevention of accidents by fire or explosion in the magazine, and for preventing unauthorised persons from having access to the magazine or to the explosives therein, and shall abstain from any act whatever which tends to cause fire or explosion and is not reasonably necessary for the purpose of the work in such magazine.

16. (1) Blasting gelatine or any of its kindred gelatinous nitro-compounds shall not be kept in the magazine after the expiration of three years from the date of its, or their, importation into British India, except with the special sanction of an Inspector of Explosives.

(2) When such sanction has been given, a written certificate, showing the period covered by the sanction, must be obtained from an Inspector of Explosives at each inspection, and must be kept by the licensee at the magazine.

17. The licensee shall, at his own expense, provide for the safe custody of the magazine, a guard which shall be of such strength as the District Magistrate or the Commissioner of Police, as the case may be, may consider to be sufficient.

3. The magazine shall be used only for the keeping of such explosives as may be specified in the license, and of receptacles for, or tools or implements for work connected with, the keeping of such explosives.

4. The interior of the magazine, and the benches, shelves and fittings therein, shall be so constructed or so lined or covered as to prevent the exposure of any iron or steel in such manner, and the detaching of any grit, iron, steel or similar substance in such manner, as to come into contact with the explosives in such magazine; and such interior, benches, shelves and fittings shall, so far as is reasonably practicable, be kept free from grit and otherwise clean.

10. No fires, lights or lucifer matches, and no substance or article which is likely to cause explosion or fire, shall be permitted to be at any time in the magazine.

11. Due provision shall be made, by the use of suitable working clothes without pockets, or of suitable shoes, or by searching or otherwise, or by some such means, for preventing the introduction into the magazine of fire lucifer matches or any substance or article which is likely to cause explosion or fire; and for preventing the introduction of any grit, iron or steel into any part of the magazine where it would be likely to come into contact with explosives; and in any part of the magazine in which any explosive is kept which is liable to be dangerously affected by water, due precautions shall be taken to exclude water from such part; but this condition shall not prevent the introduction of an artificial light of such construction, position or character as not to cause any danger of fire or explosion; and so much of this condition as relates to the exclusion of grit, iron or steel shall not be obligatory in the case of a magazine in which no explosive other than explosives of the 1st Division of the 6th (ammunition) Class is kept.

12. No person shall smoke in any part of the magazine.

13. (1) The licensee shall not employ any vessel, barge or craft to carry an explosive to or from the magazine unless the cabin, hold or other part of the vessel, barge or craft in which the explosive is or is to be carried—

(a) is constructed without any exposed iron or steel in the interior thereof,

(b) contains only explosives, and

(c) is closed or otherwise properly covered over:

Provided that clause (a) shall not apply in the case of any vessel, barge or craft which carries no explosive other than explosive of the 1st Division of the 6th (ammunition) Class, or which is specially exempted by an order of the Chief Inspector of Explosives or by an order of the Local Government endorsed on this license.

(2) The licensee shall see that the explosives to be placed on any vessel, barge or craft so employed are loaded, carried and unloaded with all due diligence and with such precautions and in such manner as will sufficiently guard against any accidental ignition.

14. The licensee shall see—

(a) that no fire, unprotected light or smoking is allowed while any explosive [other than explosives of the 1st Division of the 6th (ammunition) Class] is being received or delivered, or while the hatches or door of the magazine, or the hatches or coverings of any vessel, barge or craft alongside containing any such explosive, are open; and

(b) that no receipt or delivery of explosive is carried on, and that the hatches or door of the magazine are or is kept closed, when any vessel, barge or craft having on board a fire (other than engine-fires properly banked up) or an unprotected light is alongside a magazine containing an explosive other than explosives of the 1st Division of the 6th (ammunition) Class or in the immediate vicinity.

15. A person under the age of fourteen years shall not be employed in or enter the magazine, except in the presence and under the supervision of some grown-up person.

16. In the case of the magazine being approachable at low water by carriages, the words "vessel, barge, or craft," in Nos. 13 and 14 of these conditions, shall be taken to include a carriage.

17. (1) Two or more descriptions of explosives, which may lawfully be possessed in a licensed magazine, may be possessed in the same magazine, if they are separated from each other by an intervening partition of such substance and character, or by such intervening space, as will effectually prevent explosion or fire in one compartment from extending to another compartment.

(2) Provided as follows:—

(a) the various explosives of Classes 1 (gunpowder), 2 (nitrate-mixture), 3 (nitro-compound) and 4 (chlorate mixture), safety fuzes belonging to the 1st Division of the 6th (ammunition) Class, and such of the various explosives of the 2nd Division of the 6th (ammunition) Class, as do not contain any exposed iron or steel, may be kept with each other without any intervening partition or space;

RESOLUTION ON THE TRIENNIAL REPORT ON THE LUNATIC ASYLUMS IN BENGAL FOR THE YEARS 1909, 1910, AND 1911.

MUNICIPAL DEPARTMENT—MEDICAL.

Darjeeling, the 18th June 1912.

RESOLUTION No. 665T.—Medl.

READ—

The Triennial Report on the Lunatic Asylums in Bengal for the years 1909, 1910, and 1911.

Read also—

The Annual Returns of the Lunatic Asylums in Bengal for 1909 and 1910, with the remarks recorded thereon by Government.

THE Report under review deals with the Province of Bengal as it stood before the 1st April 1912.

2. The principal feature of the administration of the Lunatic Asylums in Bengal during the last three years has been the continuous rise in the daily average population, following a similar rise in the preceding triennium. The daily average was 886·54 in 1909, 926·48 in 1910, and 957·58 in 1911. This result is not due to any increase in the number of admissions, as the yearly average during the triennium was 172 against 179 of the previous three years and 211 of the triennium before that. The pressure upon the available accommodation has enforced an endeavour to restrict admissions to lunatics (*a*) who are dangerous, (*b*) who are absolutely incapable and have no one to look after them, (*c*) whose criminal propensities are a real nuisance to society; and to oppose the tendency of relatives to throw upon the State the burden of supporting harmless lunatics. The explanation of the rise in the daily average is to be found in the decrease in the number of discharges and deaths. A total of 296 persons were discharged during the three years, of whom 210 had recovered: the figures in the previous triennium were 344 and 223 respectively. There were 179 deaths during the three years against 226 in the previous triennium. The conclusion to be drawn from these figures is that, while more modern methods of dealing with lunatics have succeeded in reducing the mortality, increased strictness regarding admissions has eliminated the less serious cases of lunacy and has therefore necessarily reduced the number discharged as cured. The readmissions are almost entirely cases of criminal lunatics who had been discharged to stand their trial, and it may be assumed, therefore, that the cures were permanent. But the Report seems to show that the present asylum population consists to a very large extent of hopeless cases, and it may be expected in future that the number of cures and deaths combined will not equal the number of admissions; the daily average therefore will probably continue to rise.

3. The accommodation in the present Lunatic Asylums provides for 929 persons. It was therefore found absolutely insufficient for the insane population of 1911, and temporary accommodation for 90 more had to be provided. The provision of temporary accommodation is an unsatisfactory expedient, and the Asylums in the Province (though that at Berhampore was enlarged in 1905) have for some years been condemned as below the standard of modern requirements. Plans and estimates amounting to 20 lakhs had been carefully evolved for a first class Central Asylum, where a skilled alienist could apply modern methods of treatment, and it had been decided to locate the Asylum at Ranchi in conjunction with a Central Asylum for European lunatics for the whole of Northern India. The reconstitution of the Provinces has rendered necessary a reconsideration of this scheme, and the matter is under correspondence with the Government of Bihar and Orissa. But Government is of opinion that a modern Asylum should be constructed as soon as possible to contain 1,200 patients and the approved plans allow for a further increase in the accommodation, as, while it may be expected that the number of cures may increase owing to more scientific methods of treatment, the mortality will probably decrease; and it may be hoped that in the future insanity may be regarded more as a form of disease than as an irremediable infliction, and the relatives of insane persons may wish to have them properly treated at their own expense by a skilled alienist.

4. The total average annual cost of the Asylums was Rs. 1,62,577 against Rs. 1,49,525 in the preceding triennium. The average cost of each Indian lunatic, deducting the Public Works Department charges, was about Rs. 164 over the whole triennium, being slightly higher than in the previous triennium: the major portion of this is due to diet. There was a satisfactory rise in the receipts from paying patients,—Rs. 14,477 in 1909, Rs. 16,675 in 1910, and Rs. 19,005 in 1911 in the case of Indians; but as criminal lunatics constituted only 37·73 per cent. of the total population in 1911, it is probable that in many cases the relatives of the non-criminal patients are not sufficiently alive to their responsibilities for maintenance.

5. The daily average number of European lunatics rose slightly to 44·52 in 1911, and excluding the payments received, which increased in amount, the cost to Government per head was Rs. 312 in 1911. The provision of increased

and better accommodation for Europeans is even more pressing than in the case of Indian lunatics, and it is hoped that this will shortly be undertaken.

6. In spite of the overcrowding which has occurred, the health of the inmates of the Asylums during the triennium under review was good, and reflects credit on their administration. The number of admissions to hospitals was 655 in 1909, 630 in 1910, and 765 in 1911. The daily average number of sick was 115·72 in 1909, 82·81 in 1910, and 79·38 in 1911. At the Berhampore Asylum the admissions rose from 532 in 1910 to 643 in 1911, but this is ascribed to the treatment of a large number of trivial cases in the hospital in order to ensure proper supervision. Phthisis again proved one of the chief causes of mortality in all the Asylums. The statistics of Berhampore were adversely affected by the admission of 19 lunatics already suffering from this disease. The death-rate was 7·31 per cent. as compared with 8·94 in the previous triennium.

7. As in previous years, Calcutta and the district of the 24-Parganas provided more inmates than any other district in the province. *Ganja*-smoking is alleged to be the cause of insanity in the case of 122 lunatics admitted during the triennium under review. In 1911 the mental aberration in 22 cases is attributed to intemperance in drink as compared with 4 in 1910.

8. His Excellency the Governor in Council notes with satisfaction the increased attention which has been given to the organization of manufactures in the Asylums, chiefly as a means for keeping the patients employed. The proceeds from the sale of articles rose from Rs. 2,946 in 1909 to Rs. 5,296 in 1911, and the value of the manufactured goods made over for Asylum purposes rose from Rs. 17,178 in 1909 to Rs. 19,601 in 1911. The Berhampore dairy has been a great success. His Excellency the Governor in Council concurs with Colonel Harris in his appreciation of the services of the late Major C. J. Robertson-Milne, I.M.S., Superintendent of the Berhampore Asylum, who died in May 1911. To his efforts are due the good results which have been obtained at the Asylum in the face of considerable difficulties. The thanks of the Governor in Council are due to Colonel Harris for his Report and to the other officers who had charge of the Asylums.

By order of the Governor of Bengal in Council,

H. L. STEPHENSON,

Secretary to the Government of Bengal.

DISTRICT REPORTS ON WEATHER AND CROPS.

For the week ending on the 24th June 1912.

Summary.—During the week under report the monsoon broke and rain fell all over the province. The fall was heavy in the Presidency, Dacca and Chittagong Divisions and in parts of Hooghly, Howrah and Rajshahi Division, and light to moderate elsewhere. The recent rainfall has facilitated he ploughing and transplanting operations and has improved the prospects of crops generally. The harvesting of early autumn rice on low land has commenced in places in the Dacca and Rajshahi Divisions. Damage to crops by rats is reported from the Chittagong Hill Tracts. The average price of common rice has risen by about 1 per cent. as compared with the previous week. Cattle-disease is reported to be prevalent in parts of Presidency Division, Burdwan, Dinajpur, Mymensingh and Noakhali.
